

ENERGY CONSUMPTION POLICY

As HEYBELİ OTEL, we are aware of the importance and necessity of energy in today's technological world. Especially in the service sector, the provision of facilities such as heating and cooling systems, hot water supply/spa services, entertainment and or decorative electronic devices, etc., which are important in terms of customer/guest satisfaction and comfort, has an important place. When viewed from the perspective of the tourism sector, these facilities are considered as important criteria that will attract local and foreign tourists. Providing services to guests by providing these facilities creates excessive consumption.

As HEYBELİ OTEL, we use our energy efficiently and set goals to reduce our energy consumption in order to protect our world from possible dangers.

We aim to reduce our consumption volume by determining natural gas, electricity and water consumption with the reports we keep monthly. We calculate our monthly consumption per person based on the number of our guests and raise awareness of our guests in this regard..
